1. The products are equal in the definition of the sealed enclosure with respect to the acoustical signal path performance.
2. The products are equal in ingress properties based on an identical mechanical hardware platform with the same dust and water protection performance.
3. The products are identical in user control options related to ingress openings.
4. The products may experience traces of dust and water in other areas outside the sealed enclosure not affecting the acoustic signal path.
5. The products are identical in surface wetting properties.
